

Abstract of Disclosur

A gas stove is placed inside of a barbeque grill like enclosure of any shape with a lid to provide wind shielding during cooking and protect the gas stove and cooking apparatus from wind, rain, snow and other natural element when stove is not in use. The unit will have barbeque grill like frame, shelves, and wheels for maneuverability and areas to accommodate plates and food items. The lower part of the enclosure has holes to provide air intake for the gas stove and drainage.
